QUALITY IN BUILD AND DESIGN

BUILD QUALITY

OCEANIA is an industry leader in the use of Computer Aided Design and Drafting (CADD) systems, vacuum infusion and strict international quality control procedures. These are all part of its daily goal in maintaining the highest standards for quality in the boating industry. All our boats are designed to navigational and seaworthy standards. They are built using the finest materials and components, sourced from around the world. To ensure the quality of our boats, strict controls for handling, quality control and testing are carried out on a daily basis.

CONSTRUCTION

OCEANIA hulls and decks are constructed using high quality fibreglass materials to retain their beauty and strength. Gel coat, is applied using a state-of-the-art MVP airless spray system. This ensures consistent even film thickness. Successive layers of fibreglass cloth, soaked in resin, are applied to the inside of the mould over the gel coat. The number of layers, along with the type of cloth, are carefully specified and controlled to produce a consistently strong hull.

High technology core materials, are often applied in a "sandwich" construction for fibreglass boats, (depending on size), to increase thickness and rigidity.

The high density foam, with fibreglass reinforced stringers, are permanently laminated and bonded to the hull, deck and transom. This creates superior strength, for a one-piece boat, that can endure even the most extreme stresses.

Closed cell foams, are injected into the free space of the hull. Applying this innovative technology makes OCEANIA boats, not only, more comfortable for navigation, but also more solid. There is less vibration also, and overall, this has vastly improved the Safety and Quality aspects.

PRICE - QUALITY RATIO

Our boats are the most attractive option on the market when compared to similar boats. This is because of their quality, reliability and price.

OCEANIA has a considerable competitive advantage over other manufacturers due to its unique design and competitive price.

GIC Marine attends international boat shows Australia wide.
